

# Pipe Ten Dedicated Servers

## Integrated Physical Servers

### Get the Best Of Both Worlds

The simplicity of shared hosting with the power & security of dedicated.

### Lighten the load with Pipe Ten's offset services

Control Panel, DNS & Email services run on Pipe Ten's optimised servers.

### Guaranteed Resources

Experience the performance of a dedicated server with the minimum cost and complexity.

### Proactive Support & Monitoring

Actively monitored 24/7 with telephone and email support directly with engineers.

#### Custom Hardware

Every website and application has different needs and requirements, with a bespoke server from Pipe Ten you can ensure all yours are fulfilled.

#### Fully Managed

Be free to do what you do best and have peace of mind knowing that Pipe Ten actively monitors and maintains your solution so issues are addressed when or even before they occur.

#### Local Databases

For heavy or large MySQL and MS SQL applications, Pipe Ten's Integrated Physical Servers are capable of local storage and high I/O performance.

#### Offset Services

Offset DNS, Database and Email services onto Pipe Ten's specially optimised cloud allowing your web server to run without interruption.

#### Dedicated Power & CPU

Featuring the very latest server hardware, performance and security with premium location, facility and quality.

#### Full Solution Consultancy

Talk with knowledgeable server consultants who can discuss your requirements, identify your needs and build your perfect server.

\* Database storage is offset to a shared database server, dedicated database servers are available on request.

\*\* All prices are exclusive of 20% VAT and are subject to change.

† Additional IP addresses available on request with justification.

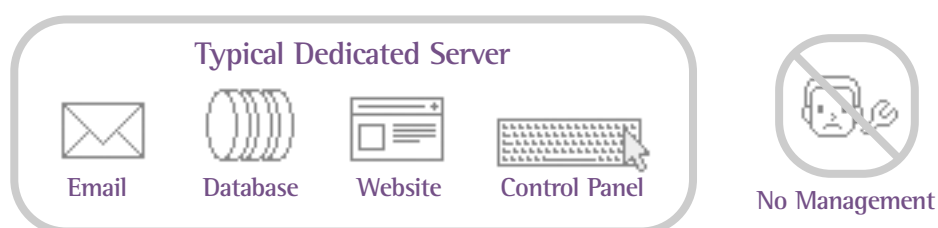

## Pipe Ten Dedicated Servers

### Integrated Servers Explained

#### Our unique cluster driven approach

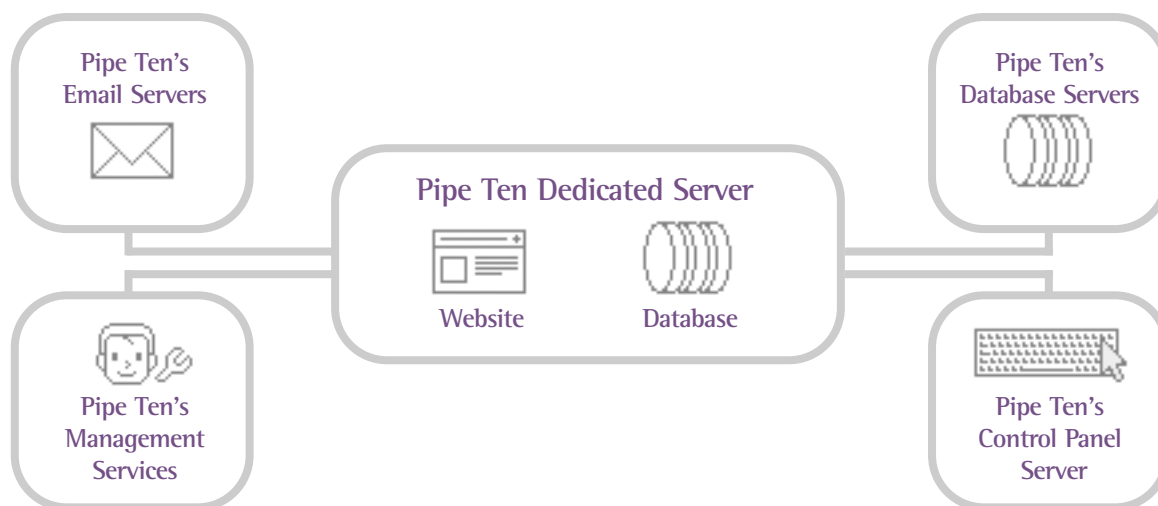

“ Typically a server provider will give you access to a single machine on which to install all of your applications such as email, databases, web server and control panel.

The more individual services your server is running, the more resources are used or reserved from the server as a whole. If one or more of these services becomes busy it can then reduce the performance of all other services resulting in a poor customer experience or outage.

Our unique integrated solution helps separate out less essential services onto specifically optimised containers, leaving your essential web and database\*\* services free to use all the resources of your dedicated server without interruption or delay.

Carl Heaton, Technical Director at Pipe Ten

## Pipe Ten Dedicated Servers

### Proactive Support & Monitoring

“ How often do you check that your web server is operational? With Pipe Ten you don't have to!

Using the latest in server and network monitoring software it is our mission to prevent, investigate or fix any issues before they affect your business or customers.

Monitoring disk space, CPU, memory & swap, service status, log anomalies and many other metrics on a sub-minute basis with direct notification of any problems to our dedicated engineers helps ensure that in the unlikely event you contact us about an issue that we'll already be working on it, if it has not already been fixed. We believe in preventing fires, not fighting them however this doesn't lessen our commitment to providing efficient, knowledgeable and friendly telephone and email support 24 hours a day. Most of our engineers have a web development history allowing us to provide you with sound advice as well as a reliable and feature-rich service.

”

Matthew Britcher, Customer Support Manager at Pipe Ten

### Our premium hardware & infrastructure

“ With the ever increasing popularity and demand of online services, hardware manufacturers have attempted to meet this increase with innovations in speed, power usage and hardware cost.

Many solution providers have taken advantage of the commodity server market by providing customers with the cheapest hardware, at the cheapest cost to themselves and to the detriment of the end users experience.

We believe in buying the best hardware to fit the service requirements and it is this quality driven focus which underpins our integrated server hardware and infrastructure choice.

Our Integrated Servers are housed in a high quality hosting facility featuring fully redundant and diverse: power distribution, UPS, generators, cooling, distribution and core networks and not forgetting the 24/7 on site security as well as fire detection and suppression. The servers themselves also feature redundant: power supplies (with different power feeds to each), memory, bonded network interfaces and storage area networks.

”

David Hooper, Technical Facilities Manager at Pipe Ten
