

## Moving Web Hosting

### Before you start

Ensure that you have a full working copy of your website files.  
Make a record of any email address settings and passwords from your current hosting provider.

### Your new account

Visit <http://www.pipeten.com> and click on 'Web Hosting'.

Choose the package which is most suitable and order it by clicking 'Order Now' and filling in the order form.

Upload your website to the server and configure any databases or scripts that it may need.

Set up your email addresses in the 'Mail Manager' section of the control panel.

### The Switch

Contact your domain registrar and have the name servers listed on your domain changed to point at Pipe Ten's name servers which are: ns1.pipeten.co.uk & ns2.pipeten.co.uk

In approximately 12-24 hours check your domain name to ensure it is now pointing to your new Pipe Ten web server.

At that point you should cancel service with your previous host provider and make sure they remove your domain name from their DNS servers.

### Check your email settings

Check the email settings in your email software to make sure your settings work with the new service. This should read something similar to:

Incoming POP3 Server: mail.pipeten.co.uk  
Outgoing (SMTP) Server: mail.pipeten.co.uk  
Username: Your full email address

### Relax

Enjoy reliable, hassle free, supported hosting service with Pipe Ten.
